

Inversion

Physicists know the term: inversion. A frequency above the zero line is inverted by placing the same frequency below the zero line. In mathematics, a plus two and a minus-two result in zero. Both frequencies cancel each other out and become ineffective. They are nullified or neutralized. We can also say both frequencies are harmonized in the Hyperspace(information level). Since information cannot be deleted, because the information remains in the quantum physical space, one has to nullify it.

destructive interference

Destructive interference occurs when the wave crests of one wave hit the troughs of the other wave. This creates a wave with a smaller amplitude. If the two waves have the same amplitude, they cancel each other out and a wave with the amplitude sum $0 = 0$ is created.

One can not erase information. One has to nullify them.

Nullification includes radiation from cell phones, networks, the earth, reception antennas and reception antennas, reception dishes, electricity networks, the electric smog, electronic smog, and much more. To put it simply, it could be said that practically everything that man has created with his "inventive spirit" in the industrial age that is related to electricity in some way had an unnatural effect on living things and typically have negative effects on health.

Not everything man invents is sensible nor healthy.

Some inventions are entertaining, some sexy, some practical sometimes practical, but ultimately they are hostile to survival. IPC is pleased to offer products that support biological health.

For more information please see my videos, talk shows, seminars, and both websites listed on page 1.

I developed with ProtectPro my own proprietary inversion technology that neutralizes harmful effects from disruptive objects whether from cell phone networks (1G, 2G, G3, 4G or the new 5G) or any other harmful radiation source and eliminates negative effects on biological entities.

I call my products quantum physical computers. They have been programmed, based on many years of experience and research, and these programs are integrated into my products. We have analyzed and probed all influences and included in the program those things that can have an adverse effect on our biological systems. The extensive programming covers nearly every source of frequencies that are known to be harmful to biological entities.
