

TRANSCRIPTS OF INTERVIEW

Stew Peters Show with Dr. Carrie Madej

Stew: [\(01:04:11\)](#):

Even the CDC, his own advisory committee on immunization practices, voted against endorsing booster shots for healthcare workers and teachers. The last Friday, CDC director, Rochelle Walensky just overruled them. The Biden administration, his political priorities come first. And that means more vaccines being forced into more arms. Dr. Carrie Madej says that she's personally examined multiple vials of the vaccines that are being forced into people's arms. And she says that she was horrified by what she saw. She says she cried harder than she ever has before. She says other American labs have looked at the contents of the vaccine vials, only to shut down shortly after. And Dr. Carrie Madej joins us now. Dr. Thank you for being here. We appreciate it.

Dr. Carrie Madej: [\(01:04:55\)](#):

Thank you, Stu. It's a pleasure to be here.

Stew: [\(01:04:57\)](#):

So, you sent these images to the show. I've looked at them. I have to say that I was creeped out, but then again, I realized, I don't know what I'm looking at here, so help me out.

Carrie: [\(01:05:07\)](#):

Okay. So first of all, the, it was in July that a local lab in Georgia said they wanted me to examine contents of a vial that they had just received. This file was fresh. It had already been used to be injected into at least one patient, because it was the end of the day they were going to discard it. So they were able to get the vial. And this particular vial was Moderna. And so I was there to witness them getting that and putting some of the contents on a glass slide with a compound microscope to look at it. And it was only nothing was added to the solution. Nothing was diluted, no human tissue was added, only the white light for the microscope. And of course over time it was becoming more room temperature from the refrigeration.

[\(01:06:01\)](#):

That was it. And so first it looked just translucent. And then as time went on over two hours, colors appeared, which I've never seen anything like this. There wasn't a chemical reaction happening. It was a brilliant, like, blue and Royal purple and a yellow and sometimes a green. And so these colors appearing, I did not know what that was. After investigating, more, superconducting material can do that with white light being emitted to it. Okay. A superconducting material would be something like an injectable computing system. Anyhow, the, these fibers were appearing more and more. Some of the fibers had a little cube structure on them. I'm not sure what that was. And also, metallic fragments were in there. They were not metallic fragments. I'm used to seeing a more exotic, they're very opaque as well as, you know, as the edge of the cover slide, so it goes, the cover slipped when you put a glass partition on that or a piece on top of the glass slide, there are edges. And so all the particulars, all these colors started to move to the edge and there was self-assembling going on. Things were growing. You know, they look synthetic, and then there was one particular, I'd say object or organism. I'm not sure what to call it, that had, tentacles coming from it. And it was able to lift itself up off of the cover. I'm sorry, off of the glass slide, the covers of the thing.

Stew: [\(01:07:39\)](#): It was alive? Like the thing was alive?

Carrie: It appeared to, yeah. It appeared to have, be self-aware or be able to grow or move in space. I mean, all I can tell you is this is not something they taught us in medical school; nothing in my laboratories; nothing that I've seen before. And I've showed this to other people in the field and they don't know what it is either.

And I thought when I first saw this and I kept looking at it over and over again at, a colleague with me, and we both thought, wow, this almost appears like it's self-aware, like it knows we're watching it.

It's just an intuition, a feeling of mine, but it was very upsetting. And so after two, two and a half hours, everything was destroyed, of course. And then I thought, well, maybe, maybe that was a fluke in a way, maybe that was just that one vial.

(01:08:31):

And so, you know, just recently, the lab was able to get more vials and same manufacturer, but, you know, different batch, of course. Looking at it the same way under the compound microscope. And another one of those tentacle like structures appeared. This was now completely under the cover slip. So there was no movement because it wasn't on the edge, but I just couldn't believe I saw another one. And, you know, it's same thing, same colors appeared over time, these fibers, you know, they're... in this time, I need to get, if they do it again, have to get a video from them, there was actually motion that you could see in the video. So, you know, this, this is very concerning and I'm also was able to look at the contents of a Johnson & Johnson vial. And there's definitely a substance that looked like graphene.

(01:09:29):

They all had graphene like structures in there, whether or not they were, I don't have the capability of testing them in order this lab, but that's what they appeared to be. They had fatty substances, like a sticky glues like substance that would be considered a hydro gel. And in those both, both of them. Right. So that means they're lying. They're lying to us about the Johnson & Johnson about not having nano lipid particles or anything of that substance and it does. In the Johnson & Johnson, they also had colors appeared. Their colors were different. They were like a fluorescent pastel kind of color. Again, lot of synthetic structures in there as well. In the Johnson & Johnson, more like the spherical ring structures were there. A lot of sphere structures. These, I'm describing what I'm seeing, but I've never seen anything like this before. And I'm, they're not supposed to be in these, these injections are falsely calling vaccines. What are they going to do to somebody? What are they going to do to a child? I started crying when I saw these, you know, second time under the microscope, cause it was confirmation of everything I saw the first time.

Stew: (01:10:46):

If I were looking into a microscope at something that I was told was a vaccine to promote health and safety and some self-aware tentacle equipped creature started moving, I would, I would probably run out of the laboratory. I mean, that's just me. I'm not scared of a lot, but that is scary hat that is going into the blood of global citizens and you're right, they want to this into our children.

Carrie: (01:11:16):

Oh yes. This was about 400 times magnification. We don't have, you know, more information than that, but, you know, people need to really, really, really stop and think about what is happening right now. And it doesn't make sense if it doesn't make sense, don't go and make, rush to a decision that you could regret. Something's not right in the world, I think we all know that right now. And to me, it's definitely on the level of a spiritual worker looking at it under the microscope absolutely. And you know, this, this pushes me, this inspires me to make more of these, maybe videos, if I can, if we can get the lab to get more of these samples, to do them in real time. So you can actually see what we're doing to have proof of, yes, this is what is happening. This is what we are seeing. So you yourself can see what is happening under the microscope, because I don't think you need to have any science background when you look at it, you'll see that something isn't right. This isn't supposed to be injected into human beings

Stew: (01:12:23):

Before you started talking about this self-aware, whatever it is that lifted itself up off of the glass, you mentioned something about an injectable computing system. What, what do you make of that?

Carrie: [\(01:12:38\)](#):

Yeah. So when colors just appeared in the solution, I mean, I'm talking about there's no color or very little, all of a sudden, the most brilliant blue, the most brilliant yellow, most brilliant purple appeared in more and more and more and more over time. I've never seen anything be able to do that besides something, unless you added another substrate for a chemical reaction, you know, it has to react with something. I didn't know what could do that. And so I started to talk to some nanotech engineers and genetic engineers, and they told me the only thing they knew of that could do that was a white light, which a white light did hit it. The microscope has a white light, a white light over time will make the reaction on a superconducting material. Superconducting is like an injectable computing system. So this is where the electronic components can now become visible under white light so you know where they are.

[\(01:13:33\)](#):

So this is proof that they are putting an operating system inside people. This happened in both the Moderna and the Johnson & Johnson samples that we observed. So, you know, these are all, we're getting little pieces of evidence put together one by one by one, but everything is pointing to the very ominous, you know, end point of this is the beginning of the advent of transhumanism, or this is the beginning of your advent of being able to have surveillance and spying done on people just like Bill Gates said he's doing right now in West Africa. People need to remember that the Gates Foundation or at least Bill Gates and Gabby, his company's working with MasterCard and Trust Stamp, an artificial intelligence program, testing it on the people of West Africa with their COVID vaccines, injections I should say, giving them a digital ID.

[\(01:14:28\)](#):

They can only get their monetary funds through the digital ID and MasterCard, no other way, no cash, nothing. And this, in all their medical records and information, downloaded into this digital format in their body. And they said in this program, this research experiment they're doing on the people, they said, well, if this substance is inside of them, this hydrogels substance, of course, why don't we use it for surveillance and predictive policing? We are, we're going to start using it for surveillance and predictive policing on the people West Africa right now, they've been doing this since July of 2020. And they said, once they have it perfected, they would like to unveil it to all the developed nations. And what are they calling it? The Wellness Pass, which is also known as a vaccine passport.

[\(01:15:15\)](#):

So how are they doing that? Right Stu? They have to put something inside your body to be able to monitor you and know everything that you're doing. So people need to wake up, what could they put inside your body for that to happen? How would they do it? I think Gates is already admitting to us how he's doing it or how he wants to do it. How much does it take? I don't know. I just know that I'm seeing these things with my own eyes, things that don't make sense, things that look like they could be used for, you know, so, the day they look like they are the advent of starting something of artificial intelligence inside the human body. And we know that the people in charge aren't to be very trustworthy at all. They've lied many times to us. The manufacturers have lied many times to us. So this is the time that we do not, we don't take this anymore. We don't take this kind of oppression and suppression. We're better than that. We are children of God, if we choose to be, right? And I, I want, I for one will not stand for it.

Stew: [\(01:16:19\)](#):

So just to wrap up here. And I know that you got to go. But I, just for responsibility purposes, you've examined things under microscopes before, you know what you're doing with a microscope. This, these vials that you, multiple vials that you examined, you have kept track of the chain of custody. Nothing was inserted into these things before you were able to look at them. I mean, this is all on the up and up. And this is the genuinely, the contents of what is found in multiple lots now, you have said, of the Moderna and the J&J vials.

Carrie: [\(01:16:59\)](#):

Yeah. At least three, three batches, at least three batches. Yes. That is correct.

Stew: ([01:17:04](#)):

That's awful. That's horrific. I can understand why you cried. Dr. Carrie Madej, thank you so much. And when you, when you do have those videos, we trust that you'll come back here to share those with the audience. I mean, people need to know what it is that's being pushed on them. People need to know that this isn't just your, your every day run of the mill health and wellness prevention. There's none of that going on here. So, we appreciate it. We appreciate it.

Speaker 11 ([01:17:32](#)):

Yes. Thanks Stewart. Thanks for having me on the show. And I'm happy to come on in the future and share more as I get more information.

Speaker 10 ([01:17:39](#)):

Great. Thank you so much. God bless you.

Carrie: Thanks.

Stew: ([01:17:44](#)):

Those images that we just looked at together and then hearing the way that Dr. Carrie Madej describes the way that she felt viewing those images through a microscope, horrific, alarming, very concerning. And we have to be worried about being around people when we talk about things like transmission and shedding, the people who have already gotten this thing. You've got to stay healthy. Dr. Vladimir Zev Zalenko saved thousands of lives in upstate New York. He's a genius, which is why he's a Nobel prize nominee, a presidential medal of freedom nominee, boasts a 99.9% survival recovery rate of all of the patients, the high risk COVID patients that he treated. He has put together his Z-Stack. The Z-Stack protocol can be found@zstackprotocol.com. All of the things that you can go to the pharmacy and put together yourself, if you want to. If you don't want to worry about dosing, figuring it all out on your own, he's got it all in one pill. You can find it@zstackprotocol.com. When we're talking about these commercially engineered viruses, who knows what it is that's floating around out here. Got to stay healthy. Early treatment protocol is the key. Find that@zstackprotocol.com, again, zstackprotocol.com.
