

TRANSCRIPTS OF INTERVIEW

Stew Peters Show with Karen Kingston Part 2

21 October 2021

Speaker 1 (00:03):

Well yesterday, Dr. Carrie Medea came on here to talk about the Hydra organism. That's a biologically immortal freshwater animal that can regrow when cut apart, even reform itself completely when it's blended up. That's pretty cool. But what's creepy is that some people think that they're secretly included in COVID-19 vaccines and there could be a lot more other creepy stuff going on too. You know, those PCR tests that you have to take constantly at work at school, or when you travel as long as you aren't vaccinated or these days, even if you are well, Karen Kingston is back with us today. She says that those tests are being used to collect genome data without our consent. And that may be just the beginning. Karen, thank you so much for being here. What is this now?

Speaker 2 (00:47):

Uh, thanks for having me back Stu so, so this has been going on as we all know since may. Um, but they didn't disclose to us why they were doing the PCR test, what the intentions were, and it's all related to actually

Speaker 1 (00:58):

It's for my health and safety, obviously it's it's to keep me protected from the world ending plague. That is COVID 19. Isn't that right?

Speaker 2 (01:06):

Um, well that that's the world ending plague was, uh, uh, behavioral insights sign up on the world. We can tell that. Oh

Speaker 1 (01:14):

Yeah, I guess,

Speaker 2 (01:17):

Yeah,

Speaker 1 (01:18):

The real, what is the real purpose of the PCR test? If not to keep me safe and healthy

Speaker 2 (01:23):

It's to collect the genetic data. And I mean, I'd like to direct people to an article on the Mayo clinic from, from may of last year, we're where they basically admit to this. Um, they talk about, Hey, we're going to be launching PCR tests in this country. Uh, you probably never heard about it before, but it's a common test used in microbiology. Um, they talk about that. It's a polymer polymer rate, holler I'm amazed chain reaction. I can't say that anyway, all that is that is copying and pasting DNA, um, code ons. That's basically what it is and, and PCR, you can copy paste, copy paste, copy paste. So they look for patterns in your genetic makeup of these different code ons. That what that make you, what you are as a human being, the diseases you have, your, you know, everything, your hair color, et cetera, et cetera.

Speaker 2 (02:09):

You can also do with other species like viruses and hydrous, if you will. Um, but it goes on to say, this is the part that's very alarming. Um, is they say, why are we collecting DNA for, um, testing? COVID-19 when SARS cov two is RNA it's single helix. So why would you use a double helix test was used in HIV because it was a deep double helix of virus. It doesn't make any sense to use it for the, um, SARS cov cov one or two because that's single helix. And they go on to say, is that the structure DNA can tell you what organism is being looked at. In the case of humans, PCR can identify a person using his or her genetic signature. In the case of COVID-19 research is a published more than 100 genomes collected from patients to identify the key features of the virus that caused this disease.

Speaker 2 (03:01):

SARS cov two. Now this was back in may. If you click on the link in the mail clinic, it'll take you to the NIH website. It looks like they've completed over 1.3 million Americans genomes, and it's available in a public database, not just to America, but to China, Japan, and all the world. This is a complete violation of the constitution and our fifth amendment. Not only can the government not take our, you know, they can't take our property without due process. The law is they took our being ness, the code that God gave us and it's available to countries around the globe. So you might be asking part of like, why would they be doing this? And here's the other, I mean, here's another alarming thing I want to point out is that they say normally would take years to develop a PCR test for COVID-19, but just like everything else in COVID-19, they were able to do it in just a few months instead of a taking

Speaker 1 (03:54):

We're ready for that. Oh, vaccine, you need one of those shirts. We got that right here. Oh, FDA approval yet. Let me just grab that over here. It's real quick. We'll just grab that real quick. All everything, everything, the masks, they were all ready to go. Uh, every single response that has been laid out here was already to go, I'll tell you why, because this was planned. This was planned years ago. Anyways, go ahead.

Speaker 2 (04:14):

It was in front, you know, the NIH played a major role in this as well. Cause so the database was going to the NIH website. The NIH also has a new technology and genetic sequencing, not just for viruses, but for sequencing out entire organs or beings. And it's called areas a R E S and it's pronounced areas as in the God of war and the God of war turns, mans hearts, bitter so that he, um, divides and he eats, you know, one another and wages war on himself. And literally it's called Aries. That's what the NIH calls it. And what areas is trained to do is you can just give it a couple I'm RNA molecules and it can then structure out an entire virus, or it can also make predictions about, um, which RNA molecules would be most compatible with what organisms. And it also can actually in deep learning promise to solve many other problems in structural biology.

Speaker 2 (05:11):

So it can actually build out an entire organ with just a little bit of information. So this information they're collecting, I think it's reasonable to assume they're collecting the genome from Americans, feeding it into air craze, and then areas is figuring out how to then, um, build, can rebuild a person or rebuild a super person. What's also interesting is the NIH has been sponsoring research for Hydra for more than two decades. Um, and as, uh, Carrie Dr. Carrie [inaudible] was saying the other day, hydrate is, is, uh, very, is regenerative, right? It can, it can rebuild itself. Um, on the NIH website, they show an image of it where if you split it in half, it'll just build two new Hydro's and then keep more and more hydros. But what's interesting is that UC Davis put out an article, uh, in 2010, uh, and what they stated in this article, and this is really alarming, um, because we're also going to go into the studies where they're doing transgenic studies using hydro, but they said in 2010 Hydra, um, has the same number of genes as humans about the same number of genes sharing, many of the many similar genes.

Speaker 2 (06:26):

They also found genes linked with Huntington's disease and with, uh, the plaque formation seen in Alzheimer's disease. So Hydra contains the genetic sequences that induce Huntington's disease. Huntington's disease is one of the most debilitating neurological diseases. You'll see. And if you take a look at videos of people who are suffering from

Huntington disease, it looks much like those victims who were injected with the vaccine and now have lost control of their neurological system,

Speaker 1 (06:56):

The unexplained tremors, and all of these things that we're seeing in all of these self recorded, published Tik TOK videos, and Instagram videos before they're taken down and cast away from society threatened with physical arrest and prosecution.

Speaker 2 (07:08):

Exactly. And that's a manifestation of the genetic sequences that are in the Hydra. Um, also keep in mind that we're going to get back to that teacher

Speaker 1 (07:20):

Unequivocally saying that Hydra exists in these shots.

Speaker 2 (07:28):

Transgenic hydro does. So transgenic Hydra is like a chimeric virus. It's when you take an organism and then you artificially induced DNA from other organisms, other species into that organism. So if you take a look at the studies that were done as early as 1999, um, there's a generation of transgenic, hydro. I just explained what that meant. You take DNA from one organism and you incorporate it into another. Um, and this is done. They actually, you can do this in different stages, but this one was done in the embryonic development phase of Hydra and hydros take anywhere from two to 24 weeks to come to full, um, uh, you know, incarnation, if you will, in normal circumstances. But what this says clearly is the focus of this proposal will be generation of transgenic Hydra. So do you create a hider that is made up of multiple species?

Speaker 2 (08:23):

This is going back to 1999. Um, it says that the Hydra embryos at the blastula stage will be injected with a small fraction of DNA resulting in hatchlings containing the viral genome, suggesting stable integration. So it's fully integrating into the genome when it's in that embryonic development and carrying the day saw images that looked like that under the microscope, it looked like the blastula number, Briana glass, Sheila. It also says that the second approach we'll use transposable elements with a broad host range of specificity. So host from amoebas to insects and potentially to humans now that they have areas transposable elements is when the PCR, when the code ons can copy paste and jump in, jump amongst themselves to create, um, mutant species, if you will, and mutant things, and what's

Speaker 1 (09:20):

Going on inside of your body,

Speaker 2 (09:22):

Some people what's going on inside their body, you know, keep in mind too. On last year we talked about there's four delivery devices in there. There's the, nanospheres the nano desks. Um, the graphene oxide tubules, which I think are actually part of Tesla phoresis, but we know there's multiple deliberately, those bubbles and discs. They have things in them. And then they have biomarkers to go to specific parts of your body. So maybe some people, they had a bio marker that had a transgenic Hydra that went to their spinal cord in their brain, which caused these Huntington diseases. Right? Other people we know there were targeting the heart. So these blood clots, Dr. Carrie midday, we talked about this. I talked with her on Monday about this, the blood clots, if the Hydra is delivered into your heart, and it's got the areas, artificial intelligence, and it also has integration from the human genome because

they were collecting that from us all throughout 2020, and continued to do that at many schools in colleges and high schools, they're there, they're demanding weekly or bi-weekly tests just to go to school from these young children and adults.

Speaker 2 ([10:28](#)):

So anyway, so there's a biomarker with the Hydra. It's got the human codes in it, it goes to the heart. Um, and then through the AI, what it's doing is it's rebuilding, uh, the heart organ. It's intelligent enough to do that.

Speaker 1 ([10:41](#)):

So a while ago, I said, why would they want genocide? If, if, if the quest here is after power and money and compliance and complete domination and ruling and reigning eternally, why would you want to just kill everybody then? Who are you going to reign over? You're just going to reign over your rich buddies. I mean, you're just going to be a small group of people here on the planet. How, how satisfying is that really? But they're replacing you. They're not just killing you. The idea here is to replace you with a completely subservient being,

Speaker 2 ([11:08](#)):

Well, I think there is some genocide going on. It's multiple, right? These people are sociopath. They don't respect human life. Uh, it's hard for us to understand that, but when

Speaker 1 ([11:18](#)):

It's hard to understand, it's not hard to understand it all. Just yesterday, just yesterday, less than 24 hours ago, I watched as this pho fake Marxist installed regime, so-called presidential administration announced that they're going to start injecting kids as young as five years old. So it doesn't surprise me at all. These people are sociopathic psychopaths, and these people do not care or value life. Your kids they're coming for your kids. And what's next. What's next. I'll tell you what's next. The superintendents at your school districts that have been paid millions of dollars by this federal government to impose these unconstitutional mask mandates against the will of American superseding, the wishes of parents with no authority whatsoever to do so. There's no code. There's no statute that allows school boards to independently act as physicians or doctors or prescribe medical devices be strapped to your children.

Speaker 1 ([12:04](#)):

You're allowing it. That's what's happening here. You're allowing it. And then they're getting millions of dollars from the federal government to do it. That's why they're doing it. Not in the name of health and safety. Of course, no kids virtually zero kids are affected by COVID. They don't spread it. They don't get it. They don't die from it, period, unless they're super underlying conditions. Now, what they're going to do is they're same thing with the vaccines. Now that the vaccines are going to be, so-called approved for emergency use authorization for children. They're going to mandate that your kids have these shots before they go to school. They're going to back you into a corner, which is why we need to reach out to people like Leila center. The center academy down in south Florida, and people need to start their own Patriot schools, no vaccine, no masks, no, none of that is required here.

Speaker 1 ([12:44](#)):

I'm telling you they're coming for your kids. They aren't going to show up at your door and tell you, bring me your children. This needs to be the line. This needs to be where it stops. And I don't know, Karen, uh, you know, you're, you're on here bringing this information and Dr. Carrie Monday, this needs to get to lawmakers who are actually going to do something about this. I mean, th th I don't, I don't know if Senator Rand, Paul has any sway anymore. I don't know what's going on here. I don't know who can stop this, but, but clearly there needs to be a bigger and broader, more honest fight by our elected representatives about this, because everybody who's remaining silent on the, the, the deaths and the injuries that this thing is causing in Americans and global citizens around the world is

complicit in this. This needs to be stopped right now. So who do we have to reach out to? Who do we have to be pushing this information in front of? I know as an analyst, you don't have all of the answers. You're doing your damndest on here every day. And so am I, uh, and this thing is being shared all over the place, but we're reaching a point now where there's got to be a line in the sand they're coming for our kids.

Speaker 2 ([13:46](#)):

I just want to be clear. There's, there's two areas that have been completely unregulated by our government. One is, um, artificial intelligence and the other one is biotech. It's been completely unregulated. These monsters have been creating, um, highbred Camaro creatures, um, using human beings and human genetic material and, and converging them right with other animals and species and insects and whatnot. This goes on in the labs. At this point, they think it would be much more fun and powerful and get off on actually what you said, doing this to us and to our children. They want to take the children and now do their, um, hybrid insect hydrant, monkey experiments on them. And, and we, we have walked away from God. This is, this is a product of, of a godless society. Make no mistake. There's God made, man. And God made woman. We, we are different.

Speaker 2 ([14:40](#)):

And these people that are wishing that everyone becomes a birthing person. Um, people have been injected with a parasite and a parasite that breeds that has multiple genetic codes in it and is developing in your body and be careful what you wish for. If you are a man and want to give birth to something, this isn't meant to terrify people, but we are under a terrorist attack by a global organization. Make no mistake about that. Our government is not for us under the prep act that was thrown out the window. If they're, if they say there's a threat to national security, what's in their best interest is what the government deems. And if our government is working on behalf of a global terrorist group, then that might be the destruction of Americans. And everyone knows you cannot defeat the American military, the American people in order to do so. You'd have to have us concede and you'd have to deceive us in order for us to concede to tyranny and self-inflicted harm and eventually suicide or execution. And that's what's happened. Make no mistake. I mean, just make no mistake. You know, people are saying there's is side effects. It's not, these are intended consequences. Look at the databases. If this wasn't intended and we have over 17,000 deaths, we've got thousands of children dying and tens of thousands of children with heart inflammation. If this isn't intentional, then why hasn't it stopped?

Speaker 1 ([16:03](#)):

I'm out of time, doctor not Dr. Karen Kingston. Thank you so much for being here. We appreciate it.
